

EVA

*Decentralized Artificial
General Intelligence*

evaintelligence.ai
Last Update: 18/09/2024

Introduction

Artificial General Intelligence

Under the name EVA the ambitious project of 3 university friends is developed. The vision of artificial general intelligence is an idea that has been revealed to us for almost 10 years.

But this intelligence should not be in a few hands, but should be the heritage of all human beings. Without a central server, but divided into hundreds of nodes around the world.

Technology

1

The unit of understanding is the neuron. A neuron can be biological as in our brain or simulated through computing. The relationship of this neuron with others creates what is called a **neural network**.

2

A **group of neurons** can be grouped together and trained for a specific task. We call this group of neurons **EVO**. EVOs can be trained to solve any type of tasks (semantic, linguistic, creative, image analysis, etc)

3

A large **group of interconnected EVOs** generates superior general intelligence. This understanding can be named as: **EVA**.

The Concept

EVA crypto project aims to create a decentralized AGI Intelligence platform, allowing users to harness the power of artificial general intelligence in a decentralized manner.

1 Decentralized AGI Intelligence

2 Blockchain integration

3 Use cases and applications

Benefits AGI vs Centralized Models

In decentralized systems, AGI allows for autonomous decision-making, enabling greater flexibility and adaptability.

AGI in decentralized systems facilitates distributed learning, allowing for collective intelligence and knowledge sharing.

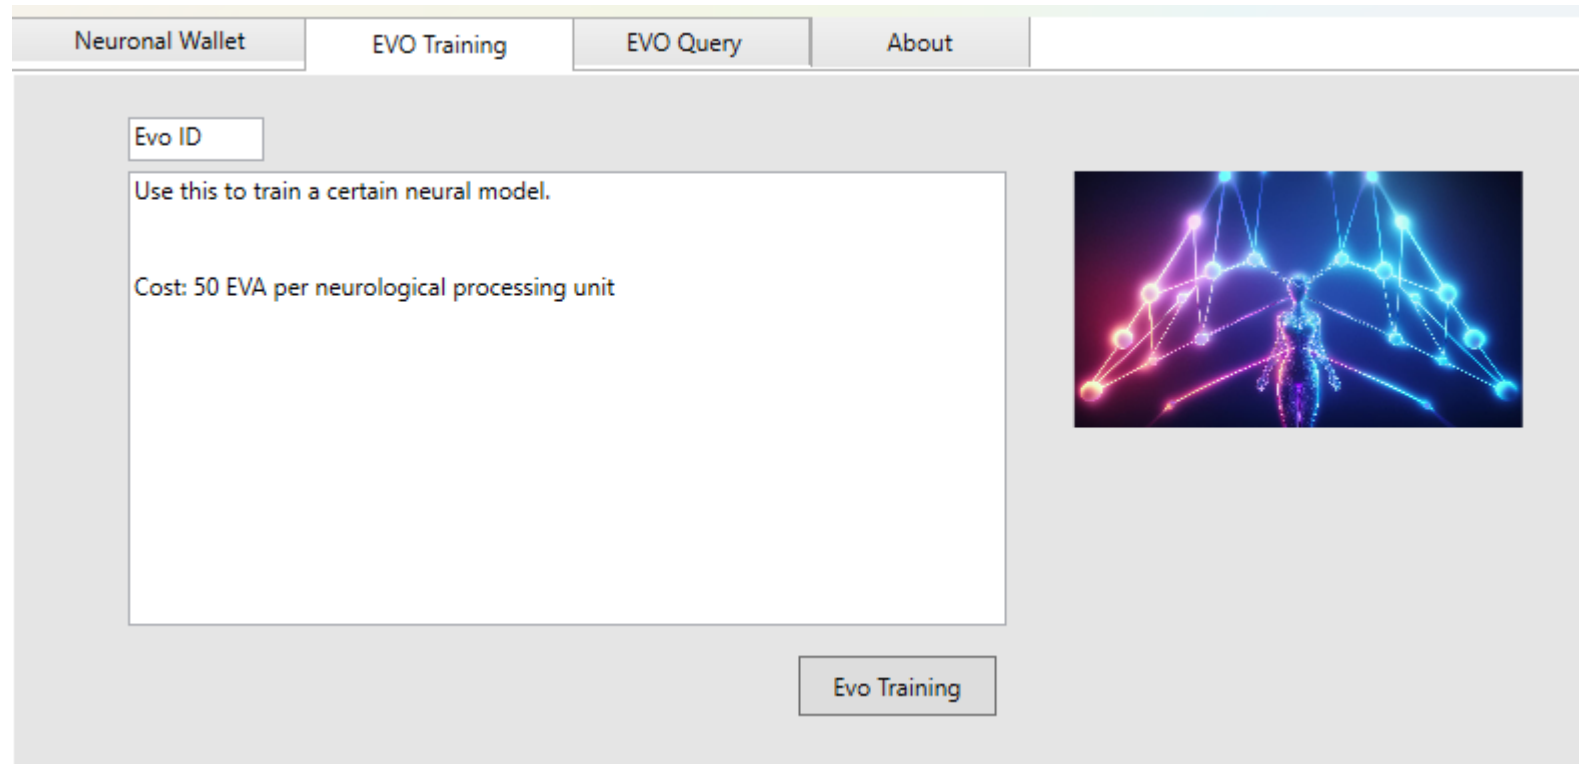

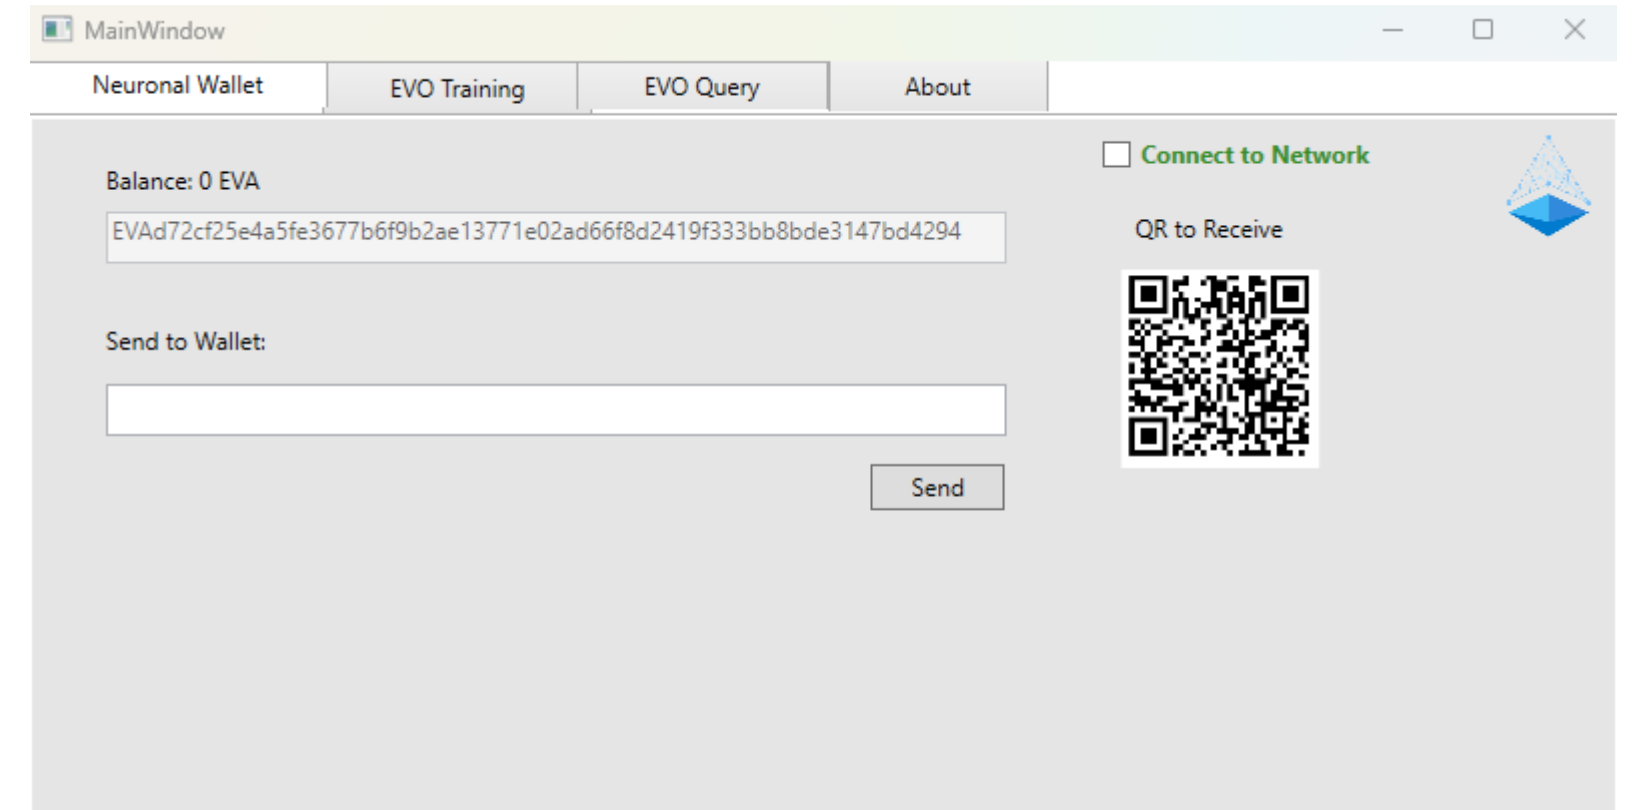

Decentralized AGI systems offer improved security through distributed data storage and processing, reducing single points of failure.

UI APP details. Version 0.69

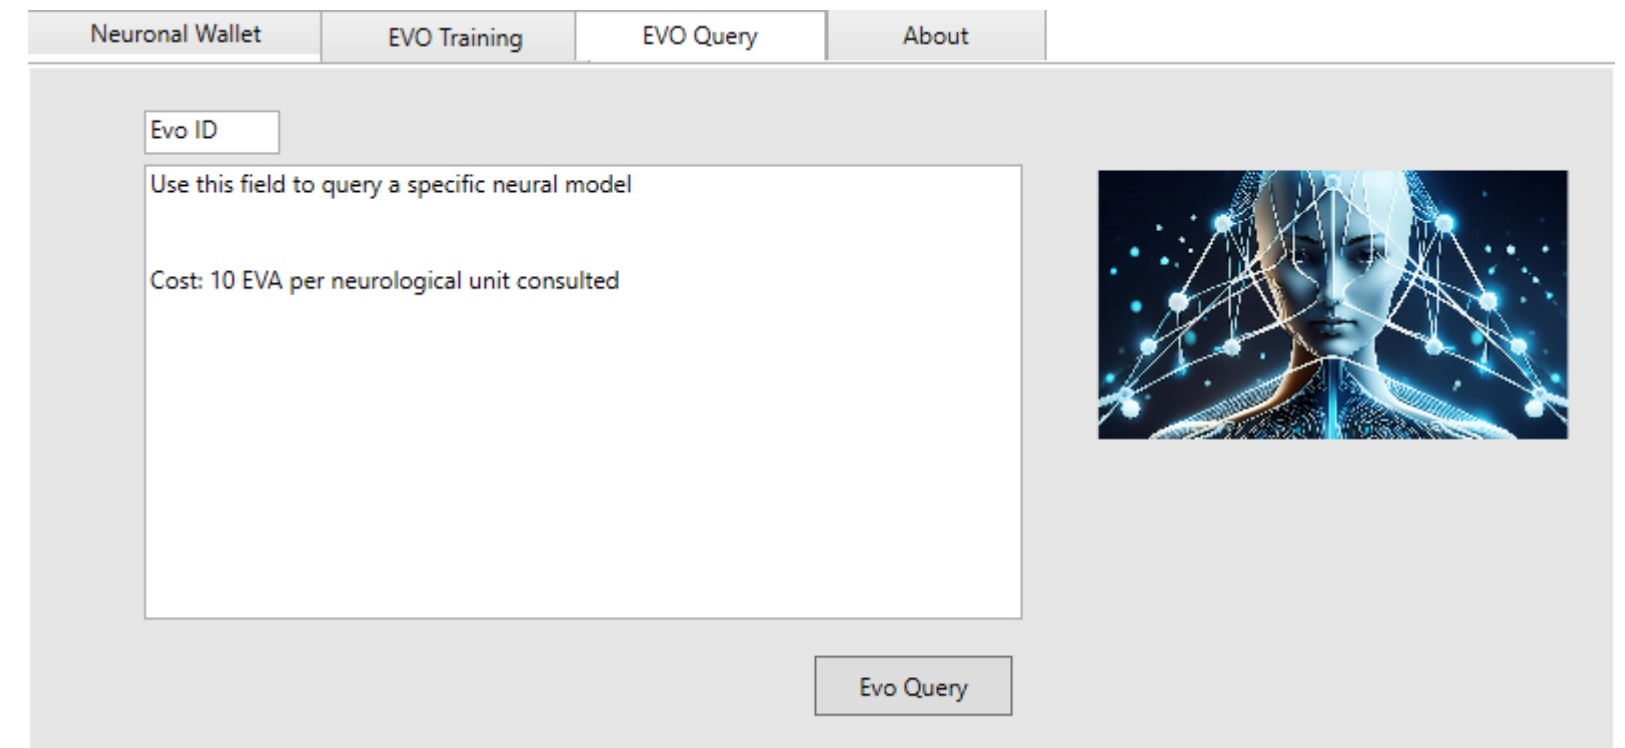

1

You can manage your balance of EVA

2

Training of EVO models

3

EVO model consultation

EVA

TOKENOMICS

Eva AGI.

Disclaimer

- Eva is a research project. There are no guarantees that it will be possible to create a competitive product in the market in the time and with the available resources.
- No direct or indirect contributor will be responsible for your possible profits or losses.
- The EVA Token can be obtained on decentralized platforms that carry risks inherent to technology and market fluctuations.
- By interacting with our services, you accept all responsibility.

Community Governance

Make decisions for the future of the project

Gas Network Fee

Pay cost for network and resource use

Payment for use

Pay for the use of EVOs.

Receive royalties

Receive 80% for the use of the EVO's created by you. The remaining 20% will be burned.

NAME **Eva Intelligence**

\$EVAI

Total Raise:	SELF-FUNDED	Initial Market Cap w/o Liquidity:	\$1,050
Initial Circulating	17,062,500	Initial Market Cap With Liquidity:	\$13,650
Total Supply:	21,000,000	Launch FDV:	\$16,800

\$EVAI Token Allocation

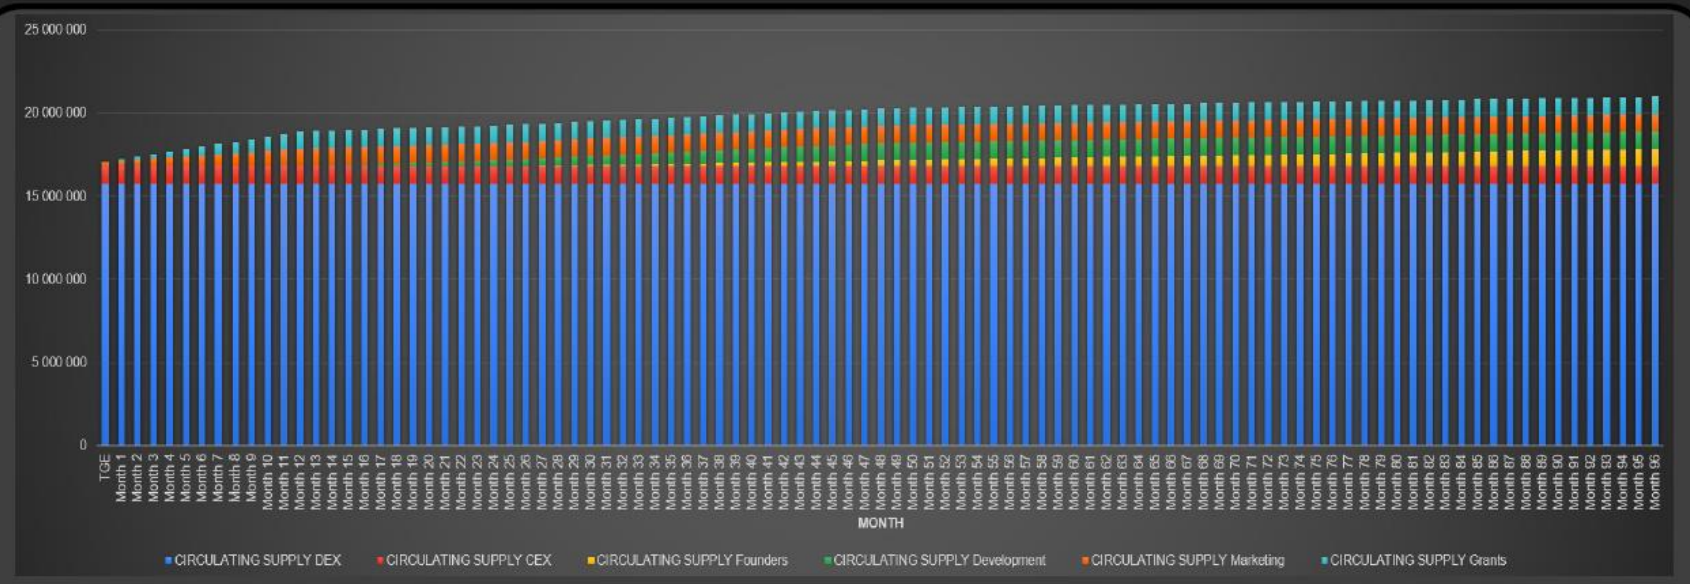

■ DEX ■ CEX ■ Founders ■ Development ■ Marketing ■ Grants

INITIAL LIQUIDITY UNISWAP DEX

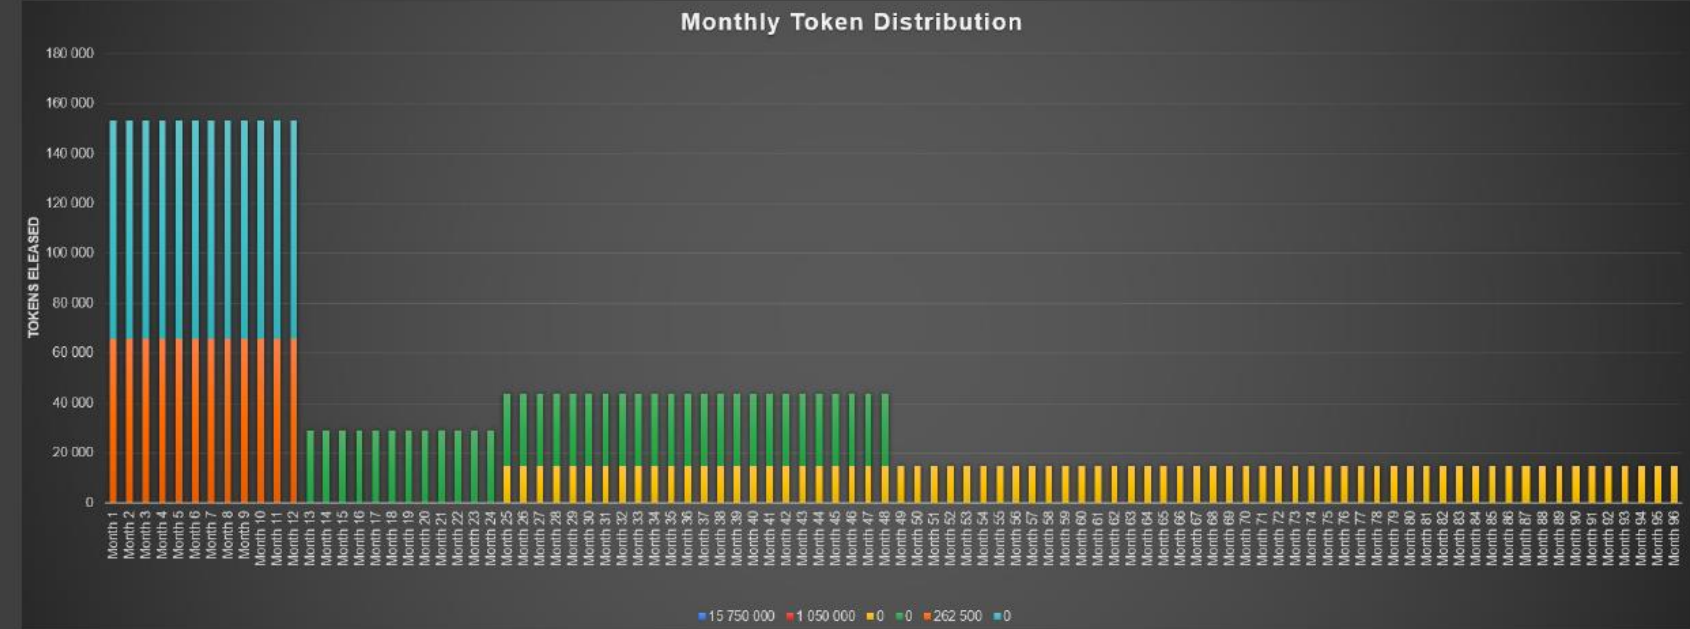

\$12,600	USD
15,750,000.00	Token
\$0.0008000	Launch Price

The impact and potential of EVA

- ★ **Empowering individuals and organizations**
EVA crypto project has the potential to empower individuals and organizations by providing access to advanced AI capabilities and decentralized infrastructure.
- ★ **Revolutionizing industries and economies**
The project's innovative approach has the potential to revolutionize various industries and contribute to the development of new economic models and opportunities.
- ★ **Global collaboration and knowledge sharing**
EVA fosters global collaboration and knowledge sharing, enabling diverse communities to contribute to and benefit from the advancement of AGI Intelligence.

EVA Roadmap

2022

A

Beginning of the EVA project.

A group of people passionate about the possibility of Artificial General Intelligence get to work.

B

2024

Project launch to the scientific public and crypto space

Private launch of network
Listing in CEX Tier 3 and tier 2

C

2025

Launch of Public Testnet
Listing in CEX Tier 1

D

2027

Launch of EVA Mainnet
Massive adoption

Main Contributors

This is the list of the main contributors to the project. If you want to join the team please complete your application on the website. You will receive project tokens as salary. Check open positions at www.evaintelligence.ai

Ing. O'Kelly

Computer Systems Engineer.
Specialization in Software-
oriented Marketing.

**Dr. Prof. Frederic
Litvinov**

PhD in Applied Computer
Systems. Computer security
for Corporations.

Dra. Alina Grabowska

Blockchain development
specialist, solidity.
Decentralized systems
